### LETTER TO FRACTAL SCIENTISTS

All my life I have thought by analogical thought and by synonyms. Even in my student age, my colleagues teased me that I wasn't thinking logically, but synonymically.

This could not be any other way because as poet, musician, playwright, psychiatrist, and pleromatic philosopher I was unconsciously involved in Symmetric behavior of thought. Through the years, having reached awareness that nature uses Symmetric logic, and urged on by my poetic and musical experience, which are closer to nature, I have found that Symmetric logic is intrinsic to nature as compared to the human mind which uses mainly Asymmetric logic.

As classic formal non-contradictory logic, being a reflection of consecutive order of time, is precisely Consecutive logic, which is namely Asymmetric logic. (As non-contradiction is only logical equivalent of temporal Consecutiveness, while Contradiction is logical equivalent of temporal Simultaneousness while Symmetric logics should be behavior of simultative-polyphonic time-flow).

In our day I recognize that my previous synonymical and analogical thought is actually fractal thought, or similar to it.- and this unconscious coincidence between our artistic unconscious fractal experience and our conscious theoretical symmetric-fractal thought remarkable in itself became one of the reasons to write to you.
